Open to relocate: Bengaluru, Hyderabad · Remote · Available to join in 5 to 10 days

PROFESSIONAL SUMMARY

Software engineer with 2.5 years building production React Native and React.js applications backed by Node.js REST APIs and SQL. Shipped a pet care platform with **100K+ downloads, 5K DAU and 50K+ weekday bookings across 250+ US and Canada locations**, and a **HIPAA-compliant healthcare platform with 400+ screens**. Hands-on with Salesforce CRM sync, Stripe and In-App Purchase payments, real-time WebSockets, native Kotlin and Swift integrations, RBAC and JWT security. **Promoted to L2 Technical Lead** for the full platform, owning technical delivery, code reviews, mentoring and post-launch hyper-care. Writes tested code with Jest and React Testing Library, following MVVM and Clean Architecture.

TECHNICAL SKILLS

Languages: JavaScript (ES2020+), TypeScript, SQL, HTML5, CSS3

Mobile and Frontend: React Native, native modules (Kotlin, Swift), React.js, Next.js (App Router), React Hooks, Redux, Redux-Saga, Material UI, responsive and mobile-first design, WebView hybrid apps, web accessibility

Backend and APIs: Node.js, RESTful API design and integration, JWT authentication, RBAC, API error handling

Databases: PostgreSQL, SQL, Prisma ORM, SQLite, Firebase, relational data modelling, query optimization

Integrations: Salesforce CRM, Stripe, App Store and Google Play In-App Purchase, WebSockets, video streaming

Architecture: MVVM, Clean Architecture, repository pattern, dependency injection, multi-tier architecture, real-time data sync

Performance: Profiling, memoization, list virtualization, debouncing and throttling, exponential backoff

Testing: Jest, React Testing Library, Vitest, TDD, unit, component and integration testing, Lighthouse

Security: HIPAA compliance, encryption at rest and in transit, audit logging

Monitoring and Analytics: Sentry, Firebase Crashlytics, Firebase Analytics, Meta Ad Tracking

Delivery: Git branching strategy, CI/CD, Jira (Scrum, Kanban), Agile

AI-Assisted Development: Claude Code, OpenAI GPT LLM integration

Currently Learning: Python, FastAPI, AWS, Docker, Terraform, Java, Spring Boot (not yet production)

PROFESSIONAL EXPERIENCE

AVASOFT Group | Chennai, India — Feb 2024 to Jun 2026

AVASOFT and zeb are entities of the same group serving different clients.

Software Engineering Analyst | zeb — Apr 2026 to Jun 2026

Enterprise Product Naming Platform | React.js · client project, 2-week delivery

- Built an AI-assisted naming platform end to end that classifies products by business type and attributes using string tokenization and whitespace pattern segmentation, generating **1,000+ context-aware name suggestions** in real time.
- Delivered the UI, reusable component architecture, state management and REST API integration, using debounced filtering and list virtualization to keep large result lists responsive.

Dynamic Form and Document Generation Platform | React.js · client project, 4-day delivery

- Shipped a 5-step form workflow with field-level validation and a **6-page dynamic PDF generation engine in 4 days**, built on reusable form components and a templated HTML/CSS rendering layer.

Software Engineer | AVASOFT — Aug 2024 to Apr 2026

Pet Care and Wellness Platform | React Native, React.js, Node.js, SQL, Salesforce · 100K+ downloads, 5K DAU, 250+ locations

- Progressed from Phase 1 contributor to **Phase 2 L2 Technical Lead for the entire platform**, a consumer product delivered as React Native apps and a mobile-first React.js web version in WebView hybrid apps, serving 250+ franchise locations across the US and Canada.
- Built the booking and scheduling module end to end across mobile and web clients, Node.js REST APIs, SQL and Salesforce CRM, using interval overlap detection and real-time CRM sync to handle **50K+ weekday and 70K+ weekend bookings at ~2,000 concurrent peak users with under 100 sync failures per day**.

- Developed Node.js REST services and SQL queries for booking and payments; resolved production defects through root-cause analysis, slow-query tuning and improved API error handling.
- Engineered real-time video streaming and in-app payment flows with WebSocket connection management, exponential-backoff reconnection and adaptive bitrate handling for variable mobile networks.
- Standardized data-fetching, retry and error recovery across booking, payment and streaming with reusable components, custom Hooks and Redux/Redux-Saga following MVVM.
- Sustained **60fps scrolling** across mobile, tablet and desktop through profiling, memory-leak detection, memoization and list virtualization; led the production cutover from the legacy application.
- As L2 Technical Lead, owned technical delivery across the platform with UX, Cloud, CRM and Security teams: conducted code reviews enforcing coding standards, led design discussions and mentored junior engineers.
- Owned 2 months of post-launch hyper-care: triaged issues in Sentry, delivered **13 client user stories in one 4-week sprint** and held the crash rate **under 0.1%**.
- Managed branch-based CI/CD promotion (feature, release, hotfix) across development, QA, integration and production; wrote Jest and RTL tests protecting booking and payment flows.
- Authored UML activity, class and sequence diagrams, functional requirements documents, cloud cost estimates and production readiness checklists; scoped requirements and planned sprints with US and Canada stakeholders on Jira.

Healthcare Records Platform | React Native, React.js, REST APIs, Stripe, HIPAA · 400+ screens, launched May 2026

- Core engineer on a 5-member Agile team shipping a HIPAA-compliant health records platform as React Native apps and a React.js web version in WebView hybrid apps, using MVVM, Clean Architecture, repository pattern and dependency injection.
- Built modules for medical records, appointment tracking, wellness logs and caregiver document sharing.
- Implemented RBAC with distinct permissions for patients, caregivers and providers, plus JWT authentication, encryption at rest, TLS in transit and audit logging on sensitive data.
- Integrated Stripe plus App Store and Google Play In-App Purchase, covering subscription tiers, renewal tracking and grace-period handling.
- Implemented native Kotlin and Swift calendar integrations, Firebase Analytics and Meta Ad Tracking.
- Cut load time **from 4.2s to 1.8s** through profiling and performance testing; held crash incidents under 0.1% with Sentry and Firebase Crashlytics.

Trainee Engineer - Mobility | AVASOFT **Feb 2024 to Aug 2024**

- Developed React Native and React.js screens and reusable components from functional requirements and designs, working with TypeScript, Redux, REST APIs, Firebase and Git in Agile/Scrum sprints.
- Debugged and resolved issues across development and staging environments under established code-review practices.

Internal AI Tools | AVASOFT and zeb · OpenAI GPT, Claude Code

- Integrated OpenAI GPT LLM responses into React.js interfaces for internal real-time tools; used Claude Code for code generation, test scaffolding, debugging and refactoring, reviewing every change against team standards before merge.

PERSONAL PROJECT

Full Stack Notes Application | Next.js, React, TypeScript, PostgreSQL

notes-app-v19s-three.vercel.app · github.com/HarishLD/notes_app

- Built and deployed on Vercel with Next.js App Router and strict TypeScript, featuring JWT authentication, tagging and filtered search on PostgreSQL through Prisma ORM.
- Followed TDD with **113 unit and integration tests** in Vitest, scored **100 on Lighthouse accessibility**, and documented architecture trade-offs in DECISIONS.md.

EDUCATION

B.E., Computer Science and Engineering | Rajalakshmi Institute of Technology **May 2020 to Jun 2024**

CGPA 8.0

CERTIFICATIONS AND CONTINUOUS LEARNING

- Full Stack Developer and AR/VR Engineer certifications (Naan Mudhalvan)
- Ran a 5-day Android and Web Development workshop for 300+ students
- In progress: Cloud and DevOps roadmap (Linux, AWS EC2, Nginx, Docker, GitHub Actions, Terraform) and Backend roadmap (Python, FastAPI, Java, Spring Boot, microservices, system design)
